SUMMARY

As a final-year ICT student at Prince of Songkla University with valuable internship experience at CP ALL, I am passionate about Full-stack Development and Data Automation. My background involves contributing to the design of data-driven systems aimed at optimizing business workflows. I am dedicated to bridging the gap between backend architecture and user-centric design, and I am eager to apply my problem-solving skills to help deliver efficient, high-impact software solutions in a professional environment.

SKILLS

Programming Languages: PHP, Python, JavaScript, Go, C, SQL
Backend Development: Node.js (Express.js), FastAPI, Go (Fiber, Gin), RESTful API Design
Frontend Development: HTML/CSS, React, Vue.js, React, Tailwind CSS
Databases: PostgreSQL, MySQL, MongoDB, Microsoft SQL Server, Database Design (ER Diagram)
AI Integration & ML: TensorFlow, Keras
Tools : Git, Docker, Postman, Swagger, Figma, Jira, Capcut, Vercel

LANGUAGES

English (Fair)
Thai (Fluent)

EDUCATION

Prince of Songkla University

Bachelor of Science in Information and Communication Technology | Cumulative GPA: 2.75/4.00

EXPERIENCE

CP ALL Public Company Limited | Data Analysis & Backend Developer Intern

Nov 2025 - Mar 2026

Engineered high-performance backend infrastructures to automate logistics, eliminating manual overhead through scalable, data-driven automation

Accomplishments:

- Engineered an Automated Warehouse Putaway System using SQL Stored Procedures to automate bin assignments based on real-time stock, weight, and volume constraints.
- Boosted operational transparency by designing an Audit Summary & Logic Analysis framework, enabling precise tracking of system decisions and reducing booking errors.
- Developed O2O Performance Analytics to calculate real-time Workload and Picker Speed, providing data-driven benchmarks to optimize warehouse efficiency.
- Visualized real-time zone monitoring (Pick/Reserve) using ApexCharts with interactive Drill-down Popups and 100% Stacked Bar Charts.
- Automated Logistics Compliance by building a vehicle and license monitoring system, replacing manual tracking with automated statistical reporting.

IO-HOPE INTERPRISE LIMITED PARTNERSHIP | Web Designer intern

Apr 2025 – Jun 2025

Delivering user-centric designs and high-fidelity wireframes to ensure brand consistency and seamless digital experiences.

Accomplishments:

- Designed high-fidelity prototypes and UIs using Figma, prioritizing intuitive navigation and modern design standards.
- Managed web deployment and CMS, configuring HostAtom and WordPress to support stable website operations.
- Translated requirements into creative solutions, enhancing brand engagement through user-focused design.

PROJECTS

Portfolio website: <https://workshop-booking-table.vercel.app/index.php> (for additional information and projects) **Senior Project**

Full-stack Restaurant Table Booking System **GitHub:** https://github.com/JakeKritsada/workshop_booking_table.git

Tech Stack: PHP, MySQL, Bootstrap 5, CSS, JavaScript

- Real-time Table Management:** Engineered a dynamic table status monitoring system (Available, Pending, Occupied) with an interactive UI to provide instantaneous user feedback.
- Security-First Backend:** Implemented robust security measures using PHP Prepared Statements to mitigate SQL Injection and utilized CSRF Tokens to prevent cross-site request forgery.
- Admin Management Dashboard:** Developed a centralized administrative portal for verifying payment slips, monitoring real-time workloads, and generating automated booking and revenue reports.

MyProduct React Shop : <https://github.com/JakeKritsada/myproduct-react-shop>

Class Project

- Product Management System:** Developed a full-stack web application with a customer interface for browsing products, featuring real-time search, category filtering, and detailed product views.
- Admin Dashboard:** Built a centralized admin panel to manage product inventory, including CRUD operations for stock levels, pricing updates, and product descriptions.
- REST API Integration:** Utilized Fetch API for seamless data transfer between the React frontend and Node.js/Express backend, ensuring responsive and dynamic user interactions.
